

Research Involving Animals

This core area addresses issues important to conducting research involving animals. This includes topics such as definition of research involving animals, ethical principles for conducting research on animals, federal regulations governing animal research, institutional animal care and use committees, and treatment of animals.

Publications on the topic:

Bulger, R. E., Heitman, E., & Reiser, S. J. (1993). The ethical dimensions of the biological sciences (Part VII, pp. 173-197). New York: Cambridge University Press.

Donnelley, S., & Nolan, K. (1990). Animals, science, and ethics. Briarcliff Manor, NY: The Hastings Center.

Fuchs, B. A. (2000). Use of animals in biomedical experimentation. In F. L. Macrina (Ed.), Scientific Integrity (2nd ed., pp. 97-127). Washington, DC: ASM Press.
